

Summer **PHOTO** ADVENTURES

Tips for Parents of Young Photographers

-  Any digital camera you have available will work great: an iPad or a cell phone...
-  Remind your child to take lots of pictures of the fun adventures you have as a family or with friends this summer.
-  Encourage experimentation! Take several photos of the same subject in different ways: centered to the right then to the left.
-  Show your little photographer how to hold the camera straight up and down (vertical) for some photos then turn it on its side (horizontal) for others. Which does your child like best?
-  Different viewpoints make for interesting photos. Try making a photo looking up (from the ground) or looking down at the subject.
-  To have the subject be in focus, not blurry, hold the camera steady when pushing the button. For a blurry effect, ask your subject to move or move the camera as you take your picture.
-  The hardest part will be choosing one photo to submit to our online Showcase!
